

## Shipping and Packing

Orders tracking online

100% control of delivery failure

Orders barcoding, there is no need to enter information about the package by hand

### Benefits

Labels **IDENTIFYING** items are printed.

Parcel/package sheets are printed to **IDENTIFY** date and shipment of orders wherever sent by managers or the receipt of a customer.

**INTEGRATION** with logistics coordination centers. The tracking number is obtained to control each package.

Packages/parcels may be sent by home delivery service and to different shops. In each case the **SHIPMENT** is handled differently.

There is a possibility to **CONTROL** the movement of parcels/packages by an employed courier or local courier company and thus avoid confusion.

Vendors/suppliers **CAN SEND** ordered goods directly to the client or deliver to the shop (the main store from which it shall be sent).

# How does it work?

Shipping module of orders allows you to simplify the control of order delivery time. Managers are also less loaded because they do not need to enter information by hand: it is enough to print the barcode.
